

# Madbull Airsoft Noveske Free Float Handguard RAS Review

Presented By:

## Noveske Free Float RAS Handguard Review

### Introduction

In this review from Fox Airsoft, we look at the new Madbull licensed Noveske free float Handguard. This Handguard features licensed Noveske trademarks on the rail, quick disconnect sling attachments, and standard 1913 Picatinny rails.

### Real Steel Comparison

The free float rail adapter system or RAS is superior to a conventional rail interface system or RIS because it mounts directly to the receiver and there is no connection to barrel. A conventional RIS system is held in place utilizing the front delta ring resulting in a significant weight being supported by the barrel which is detrimental to accuracy. In this free-float system, the barrel needs only to support its own weight which allows it to achieve the highest level of accuracy possible. Another advantage is that it allows more rail area than a conventional RIS that is limited to the length of the standard Handguard giving the user much more flexibility in the installation of accessories.

### Airsoft Version

The airsoft version of the RAS also mounts directly to the body. The included barrel lug in the kit is used to mount it. In the airsoft world, this is highly advantageous because it prevents the dreaded “barrel wobble” so common on M16/M4 style replicas.

The Handguard looks very similar to a real steel counterpart. It is so accurate, in fact, Madbull engraved the words “AIRSOFT ONLY” to ensure it isn’t mistake with a real Noveske RAS. They have also taken it a step further by blocking the gas tube hole to avoid installation on a real rifle.

The Handguard also features multiple attachment points for a quick disconnect sling mount. This is very useful in allowing the operator to utilize a sling mount position that best suits their style of play and allows them to quickly adjust when the situation requires.

## Noveske Free Float RAS Handguard Review

The Handguard is manufactured of 6065 Aluminum and is hard anodized. This is a great feature over other airsoft replicas. Many others simply paint the aluminum surface – this paint layer tends to show wear after minimal use. The anodizing process will allow this Handguard to look better longer.

Madbull offers 4 versions of the Handguard, one that is 12.658 inches (shown in our review), a 10 inch version, a 10 inch version with a gap if you'd like to have a conventional gas block or iron sight, and a 7.25 inch version.

### Conclusion

The Madbull Airsoft Noveske Free Float RAS Handguard shows uncommon quality and attention to detail. The expertise and manufacturing quality definitely stands out above most comparable products on the market. This is sure to be a hit among the purists. It's a beautiful and functional accessory to add to a custom built AEG.
